Situations of normative uncertainties have always been and will continue to be present in risk decisions and they have often been dealt with in an implicit manner. In this article, we make them explicit, which could lead to better morally informed and justified decisions about climate risks.

Governing climate risks in the face of normative uncertainties

There is a growing recognition that today's policy choices are highly sensitive to uncertainties and risk associated with the climate system and the actions of other decision makers. The choice of climate policies can thus be viewed as an exercise in risk management (Kunreuther et al., 2013a).
