Ecosystem management means different things to different people, but the underlying concept is similar to that of the long-standing ethic of conservation. Current interest in marine ecosystem management stems from concerns about overexploitation of world fisheries and the perceived need for broader perspectives in fisheries management. A central scientific question is whether the effects of ...

Concepts and issues. (Journal, magazine, 1989) [WorldCat.org]

Many marine scientists consider overfishing to be the worst impact humans are having on the oceans. The Food and Agriculture Organization estimates that over 70% of the world's fish species have been entirely exploited or depleted. By capturing fish faster than they can reproduce, we are harming entire ecosystems that interact with those species, from the food they eat to the predators that eat them.

Several disturbing issues pose a threat to the marine environment and its wellbeing, among them marine environmental pollution and degradation of marine biodiversity. Most troubling is that these issues are overwhelmingly caused by human activities which are sometimes transboundary, and their consequences will become more severe and complicated if not properly curbed.
