Life Cycles Of Kangaroos 2nd

In the pouch, the neonate kangaroo feeds off one of the mother's teats for at least a further six months while it grows into a baby kangaroo, also called a joey. After a further one and one half to two months, the joey is a mature kangaroo and goes off on its own with an average six-year lifespan.

What is the Life Cycle of a Kangaroo? | Sciencing

Males reach sexual maturity at between 15 and 20 months and females take 20 to 24 months. Although most kangaroos probably do not survive their first year, they have lived as long as 22 years in the wild. In captivity their life span is around 16 years. They have excellent hearing and vision and can go long periods of time without water.
