The Foot Posture Index University

The FPI-6 is a novel method of rating foot posture using set criteria and a simple scale. It is a clinical tool used to quantify the degree to which a foot is pronated, neutral or supinated. It is a measure of standing foot posture and so is not a replacement for gait assessment where time and facilities

Physiopedia

The foot posture index rates weightbearing posture according to a series of predefined criteria. The FPI started life as an eight-item draft version, which during a thorough validation process was eventually refined to the six-item version detailed in this manual.
